Cover: Terrestrial carbon sequestration is a wide-ranging process that can include crop production fields, grasslands, and forests. Considerable research is being done on the processes, measurement, modeling, and verification of terrestrial carbon sequestration, and the effects of carbon sequestration management practices on greenhouse gas mitigation. This was the subject of the Third USDA Symposium on Greenhouse Gases and Carbon Sequestration in Agriculture and Forestry, held in March 2005. Selected papers presented at this symposium can be found in the special section of this edition, starting on page 1338. Cover design by Jennifer Foltz, graphic designer, Kansas State University.

Message From the Editor of JAWRA ...

With the transition in Editorship completed, Susan Scalia, JAWRA's Editorial Assistant, and I are working to whittle down a small processing backlog that developed as we came up to speed. Those who have corresponded with us may already have noticed some procedural changes we have implemented. For example, I now notify authors directly of my editorial decisions, copying Susan rather than passing messages through her. I am comfortable with email and rather enjoy being in touch with the authors.

We are working on proposed changes for 2007 ...

- Make JAWRA available to libraries electronically. This will significantly increase our exposure.
- Implement a fully online manuscript review system to eliminate all the attachments we send via email.
- Place papers online as soon as proofs have been reviewed, removing the delay in waiting for the printed issue to be delivered.
- Allow papers to have color figures online and black-and-white in the printed version.

All of these changes, and more, are under active discussion, but not "cast in stone." Any comments on what you would like to see would be welcome.

Kenneth J. Lanfear, P.E., Editor
