ON THE COVER

Virginia Beach, Va., is one of many coastal areas facing a burgeoning population. More than half of the U.S. population and about 40 percent of the world's population live within 100 kilometers of a coast, and that percentage is rising every day. This growth can lead to water supply problems, such as saltwater intruding into freshwater aquifers. Read about global water challenges throughout this issue. SOILS
WORLDS UNDER FOOT

Now's the Time! . . . To Tell the Story of Soil
• To Inspire • To Educate • To Conserve • To Give

With your help, in 2008 the National Museum of Natural History in Washington, DC, opens its doors to the story of soil. During its two-year run, this 5,000 square foot exhibit will be seen by more than six million visitors a year and occupy one entire hall of the most-visited natural history museum in the world.

Unified Author Guidelines 252

All technical information published in the *Wildlife Society Bulletin* has been selected through peer evaluation. Articles identified as peer refereed are selected from manuscripts that have been subjected to rigorous review by 2-4 independent referees, an Associate Editor, and the Editor. Articles identified as peer edited have been evaluated and selected by an Editorial Panel of academicians and resource professionals performing more rapid review of content to expedite dissemination of timely resource information. Material in other features and departments not labeled with an evaluation tag is selected and edited by the *Bulletin* staff. To be published in the *Bulletin*, manuscripts must meet the criteria of broad applicability and technical merit established by The Wildlife Society and the *Bulletin* editorial process. The opinions expressed by the authors do not necessarily reflect those of The Wildlife Society. Mention of products within articles does not constitute endorsement or censure by The Wildlife Society.
