FEATURES

- 6 Applying Blasting Technology and the Mine to Mill Concept in Quarries**
For the last three years, CBS quarry, located near Maubeuge, northern France, has been conducting a global production monitoring program similar to the mine to mill concept used in the mining industry. This concept consists of optimizing the drilling and blasting while monitoring the effects on the downstream chain (vibration control, loading, hauling, crushing, plant output). This article presents the details of the successful program.
- 16 Safety Talk: Every Number Tells a Story**
Accuracy of numbers is key to ensuring the safety of the public, property, and personnel.
- 17 Security Matters**
Procedures to follow when explosives are missing from inventory
- 32 Maumee Quarry Drilling and Blasting Challenges**
This article describes the drilling and blasting challenges at the Maumee Quarry, in Maumee, Ohio, which has large in-situ cavities. The drill/blast team challenge is to drill, load, and shoot the geologically disturbed rock in a safe, cost efficient manner, while in close proximity to a commercial area.
- 40 Candidate Biographies for the Election of Officers and Directors**
- 44 Photo Contest**

COVER STORY

CONTENTS —

Even though the United States has been slow to embrace its use in electric power generation, uranium has reached record highs. This has spurred a kind of rush in the mining industry. Recovery techniques at the Antelope uranium project in Wyoming are discussed on page 17. Cover design by Johanna McGinnis, ME's Media Manager.
